TITLE OF INVENTION: Peptide-Based Immunotherapeutic Agent for Treating Allergic Disea
TILE REFERENCE: SPO-103
CURRENT PAPLICATION NUMBER: US/09/142,524D
CURRENT PILING DATE: 1998-09-09
PRIOR APPLICATION NUMBER: PCT/JP97/00740
PRIOR APPLICATION NUMBER: PCT/JP97/00740
NUMBER OF SEQ ID NOS: 174
SOFTWARE: Patentin version 3.1
SEQ ID NO 52

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-10-212-679-399

Sequence 399, Application US/10212679

Publication No. US20030125536A1

GENERAL INFORMATION:

APPLICANT: Fanger, Gary

APPLICANT: Dillon, Davin

APPLICANT: Foy, Teresa

APPLICANT: Poy, Teresa

APPLICANT: Poy, Teresa

APPLICANT: Poy Teresa

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: AND DIAGNOSIS OF BREAST CANCER

FILE REFERENCE: 210121-419C14

CURRENT APPLICATION NUMBER: US/10/212,679

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 73, 1

TITLE OF INVENTION: Peptide-Based Immunotherapeutic Agent for Treating Allergic Disea
TITLE OF INVENTION: SPO-103D1
CURRENT PAPLICATION NUMBER: US/10/354,240
CURRENT PILING DATE: 2003-01-29
PRIOR APPLICATION NUMBER: PCT/JP97/00740
PRIOR APPLICATION NUMBER: US 09/142,524
PRIOR FILING DATE: 1998-09-09
PRIOR FILING DATE: 1998-09-09
NUMBER OF SEQ ID NOS: 174
SOPTWARE: Patentin version 3.1
SEQ ID NO 59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

; Sequence 5, Application US/09509593
; Patent No. 6572860
; GENERAL INFORMATION:
; TITLE OF INVENTION: CONJUGATED POLYPEPTIDES FOR TREATING HERPES
; TITLE OF INVENTION: SIMPLEX VIRUS, COMPOSITIONS AND VACCINES CONTAINING SAME AND U
; TITLE OF INVENTION: THEREOF FOR TREATMENT OR PREVENTION OF HERPES SIMPLEX VIRUS AND I
; TITLE OF INVENTION: DIAGNOSTIC TOOL AND IN DIAGNOSTIC KIT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
